GEMS: Gateway to Exploring the Mathematical Sciences

What: The GEMS Project is a program for High School students and advanced 8th graders to explore math in a fun college environment. The Saturday morning GEMS workshop typically begins with a forty-five minute presentation by a professor, followed by a forty-five minute breakout session, with a snack in between. In the breakout sessions, students split into small groups to conduct their own hands-on personal explorations related to the presentation. Each breakout group consists of approximately six to eight students and is facilitated by the colleges’ undergraduate and graduate mathematics students. The groups then make presentations and explanations underscored with lively participation. Participation is limited to 90 students. Sign ups required. For more information on signing up, please visit:

http://ccms.claremont.edu/GEMS

How: Teachers or parents may bring a group of students and join us, or parents may drop off their children themselves (ages 13 and over) if they prefer. Sign in sheets that provide adult contact information are available inside the building and must be completed by adults.

Where: Founders Room on the Claremont McKenna College Campus. (East 9th St. Claremont, CA 91711) It is adjacent to Bauer Center.
